PRODUCTIVITY ON DEMAND

Powerful and Environmentally Friendly

- EU Stage IV engine
- Komatsu fuel-saving technology
- Eco guidance & Eco-gauge

First-Class Comfort

- Fully air-suspended operator seat
- · Low-noise design
- Hydro-pneumatic suspension

Maximised Efficiency

- Komatsu Traction Control System (KTCS)
- Selectable working modes
- · Adjustable idle shutdown
- Integrated payload meter (optional)

Safety First

- Komatsu SpaceCab™ Built-in ROPS/FOPS
- Rear-view camera system
- · Safe cab access

Easy Maintenance

- Ground level access to filters
- Reversible radiator fan
- Power cab tilt

KOMTRAXTM

- Komatsu Wireless Monitoring System
- 3G mobile communications
- Integrated communication antenna
- Increased operational data and fuel savings

Complimentary maintenance program for customers

Powerful and Environmentally Friendly

Productivity on demand

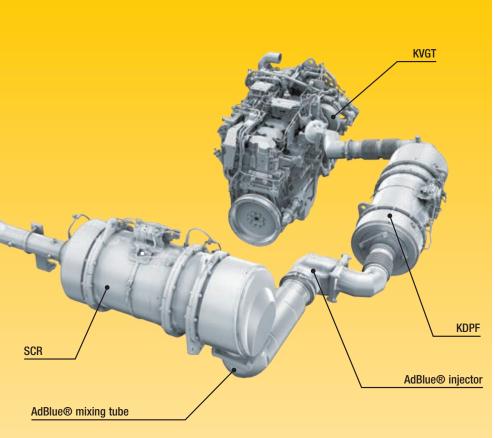

With a powerful Komatsu EU Stage IV engine, the advanced Komatsu Traction Control System, selectable working modes for ondemand performance adjustments, a robust exterior, and state-of-theart solutions for its suspension and retarder, the HM400-5 is a perfect choice for any jobsite, in any conditions.

Komatsu fuel-saving technology

The variable displacement piston pump reduces Power Take-Off (PTO) loss. Improvements in transmission and axles increase energy savings, and the sophisticated electronic control of the engine operation helps to achieve optimal energy efficiency.

Adjustable idle shutdown

To reduce unnecessary fuel consumption and exhaust emissions, and for lower operating costs, the Komatsu auto idle shutdown automatically turns off the engine after it idles for a set period of time, which can be easily programmed from 5 to 60 minutes. An Eco-gauge and Eco guidance tips on the cab monitor further encourage efficient operations.

Exhaust Gas Recirculation (EGR)

Cooled EGR is a technology well-proven in current Komatsu engines. The increased capacity of the EGR cooler now ensures very low NOx emissions and a better engine performance.

High-Pressure Common Rail (HPCR)

To achieve complete fuel burn and lower exhaust emissions, the heavy-duty High-Pressure Common Rail fuel injection system is computer controlled to deliver a precise quantity of pressurised fuel into the redesigned engine combustion chamber by multiple injections.

Komatsu Closed Crankcase Ventilation (KCCV)

Crankcase emissions (blow-by gas) are passed through a CCV filter. The oil mist trapped in the filter is returned back to the crankcase while the filtered gas is returned to the air intake.

Komatsu Variable Geometry Turbo (KVGT)

The KVGT provides optimal airflow to the engine combustion chamber under all speed and load conditions. Exhaust gas is cleaner, fuel economy is improved while machine power and performance are maintained.

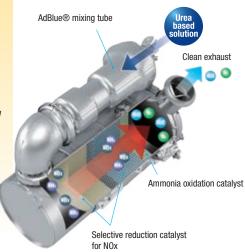

Komatsu EU Stage IV

The Komatsu EU Stage IV engine is productive, dependable and efficient. With ultra-low emissions, it provides a lower environmental impact and a superior performance to help reduce operating costs and lets the operator work in complete peace of mind.

Heavy-duty aftertreatment

The aftertreatment system combines a Komatsu Diesel Particulate Filter (KDPF) and Selective Catalytic Reduction (SCR). The SCR injects the correct amount of AdBlue® into the system at the proper rate to break down NOx into water (H2O) and non-toxic nitrogen gas (N2). NOx emissions are reduced by 80% vs. EU Stage IIIB engines.

Adjustable idle shutdown

Eco-gauge and Eco guidance

Fuel consumption history

Maximised Efficiency

Komatsu Traction Control System (KTCS)

For its world renowned rigid dump trucks, Komatsu developed various wheel slip control systems that were refined and combined with new technologies to produce the advanced traction control system that equips all HM400-5 machines. KTCS automatically provides optimum traction in any ground condition. If tyre slippage is detected by one of the speed sensors located on four of the wheels, it triggers the automatic application of the inter-axle differential lock. If slippage persists, the intelligent brakes systems automatically control the slipping wheel and regain traction on the opposite side. This improves productivity and tyre durability.

K-ATOMiCS transmission

Komatsu's exclusive electronically controlled transmission, or K-ATOMiCS, is tuned perfectly for the HM400-5. The "total control system" manages both the engine and transmission by monitoring the vehicle's condition. This Komatsudesigned technology guarantees smooth shifting and maximises transmission life.

Large capacity body

The HM400-5 has a payload of 40 tonnes that combines with a loading height of only 3.165 mm to enable easy loading. The truck features a low centre of gravity and a high ground clearance.

Selectable working modes

"Power mode" is for high production jobs and uphill hauling. It increases the engine's maximum output and raises the upshift and downshift engine speeds during operation. For lighter work on flat ground, the "Economy mode" will lower the engine's maximum output and the upshift and downshift speeds.

Payload meter (optional)

The loaded weight is displayed on the cab monitor, and its status is also communicated to the loader operator with an external light, located on top of the cab. PLM data is stored in the truck's controller: it can be directly downloaded to a PC and is included in the KOMTRAXTM data you can access via the internet.

Komatsu Traction Control System (KTCS): maximum machine performance on soft and slippery ground

Payload meter displays the loaded weight

First-Class Comfort

Wide and comfortable cab

The wide Komatsu SpaceCab™ with user-friendly controls provides a comfortable and safe work environment. A fully adjustable airsuspended seat dampens vibrations and reduces the fatigue of long shifts. Large front and electric side windows give a superior visibility and increased confidence. The rear window can be electrically heated for quick defrosting.

Unique hydro-pneumatic suspension

On both the front and rear axle, Komatsu's unique trailing arm hydropneumatic suspension gives the HM400-5 a smooth ride with reduced pitching and excellent driving comfort. Less shocks for the operator and for the machine components also mean less spilled material and increased durability, comfort and productivity.

Low-noise design

To reduce noise levels, the cab is mounted on viscous dampeners. Further noise reduction is achieved by the integrated cab floor: it makes the cab air-tight and seals off the engine compartment. A low-noise and sound-insulated muffler helps to bring sound levels way down, to just 72 dB(A).

Set the steering wheel to the most comfortable position

The full size trainer seat has a foldable cushion and back rest for easy cab entry and access to the air conditioner filter and glove compartment

Convenient auxiliary input (MP3 jack) and 12 V power supply

Information & Communication Technology

Lower operating costs

Komatsu ICT contributes to the reduction of operating costs by assisting to comfortably and efficiently manage operations. It raises the level of customer satisfaction and the competitive edge of our products.

Large TFT colour monitor

A large user-friendly colour monitor enables safe, accurate and smooth work. Multilingual and with all essential information available at a glance, it features simple and easy-to-operate switches and multifunction keys that provide fingertip access to a wide range of functions and operating information.

Eco guidance

The monitor panel displays instant guidance messages to help promote energy saving, and the Eco-gauge indicates the actual fuel consumption: keep the Eco-gauge in the green zone for better fuel efficiency. To further improve savings, logs can be consulted for operations, Eco guidance and fuel consumption.

Eco guidance supports energy saving in real

Tough and Reliable

Safety First

Safer with KTCS

By operating only the accelerator, Komatsu's unique Traction Control System (KTCS) allows full-time allwheel drive, along with safe and easy turning on soft ground and slippery roads. Thanks to this superior steering, no extra skill is required to drive an HM400-5.

Wet multiple-disc brakes and retarder

Wet multiple-disc brakes are tailored for the HM400-5, with proven performance in larger articulated and rigid trucks. The large-capacity, continuously cooled, wet-multiple disc brakes also function as a highly responsive retarder for greater confidence when travelling downhill at higher speeds. (Retarder absorbing capacity, continuous descent: 510 kW 684 HP)

Excellent all-round visibility

To keep the working area under control, a laminated-glass windshield, wide side windows, a standard rearview camera and monitor, 3 additional under-view mirrors and 4 rear-view mirrors combine to minimise blind spots.

Rear frame inclination sensor

To help avoid personal and machine damage, the system will issue a warning if ever there should be a risk of body tip over.

Supplementary steering and secondary brakes

Standard features on the HM400-5 include supplementary steering and secondary brakes. They help to guarantee safety in emergency situations.

Built-in ROPS/FOPS to ISO 3471 and SAE J1040-1988c standards

Safe cab access with handrail, away from the potentially hazardous articulation

Rear-view camera system

Secondary engine shutdown switch

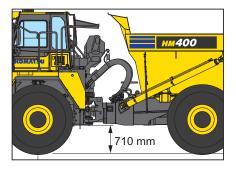

Easy Maintenance

Ground level access

Transmission oil filters and brake systems can be serviced from ground level.

Ground clearance

With 710 mm free space, the hinge connection on the HM400-5 stays out of the mud and its robust maintenance-free build gives it a longer life.

Reversible radiator fan

By a touch on the monitor panel, the radiator can be cleaned easily with a reversible, hydraulically driven cooling fan. A clean radiator reduces fuel consumption and increases overall machine performance.

AdBlue® tank

For simple access, the AdBlue® tank is installed next to the fuel tank.

Lowest brake maintenance cost

No matter how abrasive the application, no need to worry about an early replacement of the brake disc packs. Brakes on the HM400-5 are embedded in an oil bath and sealed off from the environment. Their exceptionally long overhaul period minimises maintenance costs.

Tilting cab

The cab can be electrically tilted rearward 27 degrees to provide easy maintenance and service to the engine and transmission.

KOMTRAXTM

The way to higher productivity

KOMTRAX™ uses the latest wireless monitoring technology. Compatible on PC, smartphone or tablet, it delivers insightful and cost saving information about your fleet and equipment, and offers a wealth of information to facilitate peak machine performance. By creating a tightly integrated web of support it allows proactive and preventive maintenance and helps to efficiently run a business.

Knowledge

You get quick answers to basic and critical questions about your machines – what they're doing, when they did it, where they're located, how they can be used more efficiently, and when they need to be serviced. Performance data is relayed by wireless communication technology (Satellite, GPRS or 3G depending on model) from the machine to a computer and to the local Komatsu distributor – who's readily available for expert analysis and feedback.

Power

The detailed information that KOMTRAX™ puts at your fingertips 24 hours a day, 7 days a week gives the power to make better daily and long-term strategic decisions – at no extra cost. Problems can be anticipated, maintenance schedules customised, downtime minimised and machines kept where they belong: working on the jobsite.

Convenience

KOMTRAX™ enables convenient fleet management on the web, wherever you are. Data is analysed and packaged specifically for effortless and intuitive viewing in maps, lists, graphs and charts. You can foresee eventual maintenance issues and required spare parts, and troubleshoot a problem before Komatsu technicians arrive on site.

Specifications

ENGINE

Komatsu SAA6D140E-7
Common rail direct injection, water-cooled, emissionised,
turbocharged, after-cooled diesel
2.000 rpm
353 kW/473 HP
348 kW/466 HP
6
140 × 165 mm
15,24
2.257 Nm (230 kgf-m)
Electronically controlled
Gear pump, force lubrication
Full-flow filter
Dry type with double elements and precleaner (cyclonpack type), plus dust indicator

TRANSMISSION

110/11/5//11551-017	
Torque converter	3-elements, 1-stage, 2-phase
Transmission	Full-automatic, counter-shaft type
Speed range	6 speeds forward and 2 reverse
Lock-up clutch	Wet, single-disc clutch
Forward	Torque converter drive in 1st gear, direct drive in 1st lock-up and all higher gears
Reverse	Torque converter drive and direct drive in all gears
Shift control	Electronic shift control with automatic clutch modulation in all gears
Max. travel speed	56 km/h

STEERING SYSTEM

Туре	Articulated type, fully hydraulic
	power steering with two
	double-acting cylinders
Supplementary steering	Automatically actuated, electrically powered
Minimum turning radius, wall to wall	8,89 m
Articulation angle	45° each direction

SUSPENSION

Front	Hydro-pneumatic suspension
Rear	Combined hydro-pneumaticand
	rubber suspension system

TYRES

Standard tyres	29.5 R25

CAB

Complies ISO 3471 ROPS (Roll-Over Protective Structure) ISO 3449 FOPS (Falling Object Protection Structure) standards.

AXLES

Full time all wheel drive with Ko	matsu Traction Control System.
Final drive type	Planetary gear
Ratios:	
Differential	3,727
Planetary	4,941

BRAKES

Service brakes	Independent front and center wheel brakes, full-hydraulic control, oil-cooled, multiple-disc type
Parking brake	Spring applied, calliper disc type
Retarder	Front and centre axle brakes act as retarder

MAIN FRAME

Туре	Articulated type, box-sectioned
	construction on front and rear.
	Connected by strong torque tubes.
